PRODUCT RANGE

Gas Expansion Burner

The 60mm Gas Expansion Burner has been designed for the application of Preform. The Burner has been designed to minimise the need to bend over the burner and to reduce the occurrence of back strain associated with prolonged application of the Preform. The Burner allows the operator to stand erect during the Preform application.

The burner is angled at 45 deg to allow for the preheating of the Preform whilst it is being applied...

The Gas Expansion Burners are solid and robust and can be attached to a mobile gas bottle or one secured to the rear of the vehicle.

Drop On Glass Beads.

The Glass Beads are available in 25kg bags for the convenience of handling.

The Glass beads have been fully tested by the RTA and they comply with the requirements of AS/NZ 2009-2002.

Quartz Bead Mix

The Quartz Bead Mix is available in 20kg bags for the convenience of handling.

The Quartz Bead Mix is a 70-30 mix and its durability is performance based. This Quartz Bead mix when used on the RTA tests still provided compliance with retro reflectivity and Skid resistance after 5 million hits on the RTA tests.

DPI Thermoplastic Primer

When applying Preform to any non asphaltic surface you will need to apply a coat of DPI Primer to achieve the strongest possible bond.
